Professional Summary

Software Engineering student (7th semester at University of Brasília - UnB) with proven experience in Full Stack development, process automation, and software architecture. Proven track record of streamlining business workflows with AI/LLMs and maintaining high-performance systems using PHP (Laravel), Python (Django), and React. Focused on clean code, automated testing, and CI/CD pipelines in agile environments.

Professional Experience

Full Stack Software Development Intern December 2025 – Present
Transoft Tecnologia da Informação

- Work on the evolution and maintenance of the **Tecview** platform in an agile environment (**Scrum/Jira**), building full-stack features using **PHP (Laravel)** and **AngularJS**.
- Refactor backend architectures targeting performance and query optimization across **PostgreSQL** and **MongoDB** databases.
- Troubleshoot complex issues through log analysis, Webhook management, and container monitoring with **Docker** on Linux environments.

Software Analysis & Automation Intern January – December 2025
Companhia de Saneamento Ambiental do Distrito Federal - Caesb

- Designed and built **SalvaDocs**, a **Python** platform integrated with LLMs/AI to automate structured data extraction from PDFs, eliminating operational bottlenecks.
- Produced technical documentation, reports, and automation scripts for processing large volumes of data.
- Supported system transitions and API integrations from legacy software into modern digital solutions.

Featured Projects

SalvaDocs - Intelligent Document Analysis [\[GitHub \]](#)
Technologies: Python, Flask, React, Node.js, SQL Server, OpenAI API

- Full-stack platform created to automate and accelerate complex document parsing workflows using AI.
- Developed robust backend endpoints for file parsing and an interactive, user-friendly React interface.

ParticipeMais - Civic Engagement Platform [\[GitHub \]](#)
Technologies: Django REST Framework, React, PostgreSQL, Docker, LGPD

- Full-stack web system focused on public participation, built under strict security and data privacy standards (LGPD).
- Designed REST CRUD endpoints and deployed the architecture using Docker containerization.

UnBook - Open-Source Academic Platform [\[GitHub \]](#)
Technologies: Python, Django, JavaScript, MySQL, Web Scraping

- Open-source platform for anonymous faculty evaluation by UnB university students.
- Built backend logic in Django, data ingestion routines (SIGAA web scraping), and responsive user interfaces.

Technical Skills

- | | |
|---|--|
| • Languages: Python, JavaScript, PHP (Advanced); SQL, HTML/CSS, C/C# | • DevOps & Systems: Git, Docker, Linux (Ubuntu), Nginx, Swoole |
| • Frameworks & Libs: Django, Laravel, Node.js, FastAPI, React, AngularJS | • Methodologies: Scrum, Kanban (Jira), Code Review, QA / Unit Testing |
| • Databases & Cache: PostgreSQL, MySQL, SQL Server, MongoDB, Redis | • Tools: Power BI, MS Office, Atlassian Suite |

Education

B.S. in Software Engineering (2023 - Present)
Universidade de Brasília - UnB (7th Semester)

Languages

English: C1 Advanced
Portuguese: Native
